

Manage HR Groups and Roles

Lab 02

 15-20m

Lab Objectives

You will achieve the following objectives:

- Create a new HR Group for Employee Relocations
- Add HR professionals to the group

Scenario

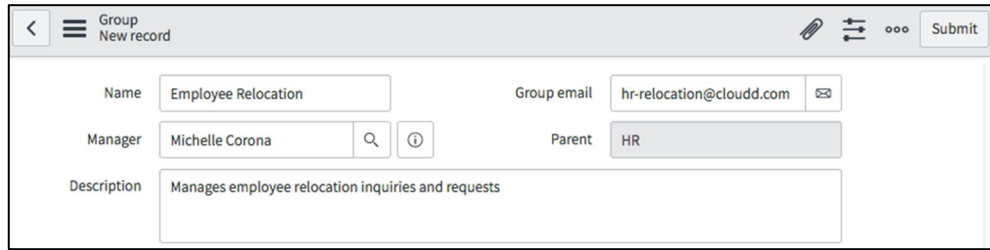

Cloud Dimensions is growing rapidly, so they have decided to open a new location in the United Kingdom. Many existing employees have expressed a desire to relocate. As the HR Administrator, you have been tasked with defining a ServiceNow solution that allows employees to request a relocation. The first step in this process is to create a group that will handle relocation requests and to add members to that group.

A. Create a New HR Employee Relocation Group

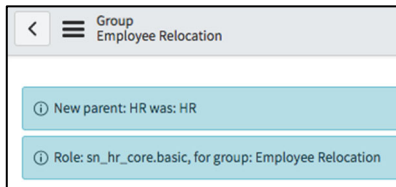

In this part of the lab, you will create a new HR Group for Cloud Dimensions Relocation Specialists. Because this is another HR Group, it will be a child of the primary HR group and will automatically inherit the HR Basic role.

1. You should be impersonating **HR Admin**. If not, log in as the System Administrator **[admin]** using the credentials provided to you, then impersonate **HR Admin**.
2. **HR Administration > Manage Roles > Manage HR Groups**.
3. Open the **HR** group.
4. On the Groups related list, click **New** to create a new group.

5. Complete the form as follows:
 - a) Name: **Employee Relocation**
 - b) Manager: **Michelle Corona**
 - c) Description: **Manages employee relocation inquiries and requests**
 - d) Group email: **hr-relocation@cloud.com**
 - e) Parent: **HR** <should already be selected>

6. Select **Save** from the form context menu.
7. Observe the confirmation messages that are displayed:

Note: Because the Parent group is HR, the Employee Relocation group automatically inherited the roles and Skills assigned to the HR group.

B. Add HR Professionals to Group

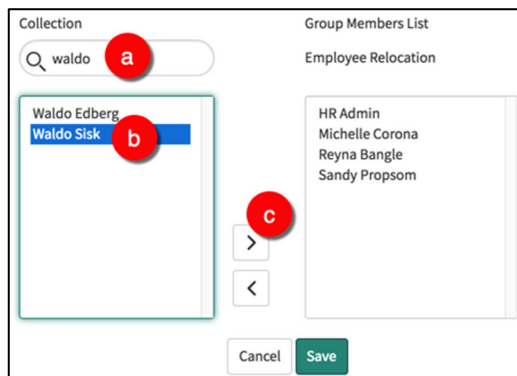

Now that the group is created, HR professionals need to be added who can handle the Cases.

1. Select the **Group Members** related list, then click **Edit...** to add members to the group:

Note: The **Edit...** option allows you to select from a list of existing Users to add to the group. Clicking the **New** button would create a new User record and is not typically used in this way.

2. Follow these steps to add members to the Employee Relocation group:
 - a) In the search box over the Collection column, begin typing '**sandy**'.
 - b) Select **Sandy Propsom** from the filtered list.
 - c) Click the **Add** button to move Sandy to the **Group Members List**.
 - d) Repeat steps a through c to add the following additional group members:
 - **HR Admin**
 - **Michelle Corona**
 - **Reyna Bangle**
 - **Waldo Sisk**
 - e) Click **Save**.

Note: Double-clicking a name in either list will also move it from one list to the other. For example, double-clicking Sandy's name in step B would move him to the Group Members List.

3. Observe the confirmation messages that Roles have been granted.

Note: Some of the group members have now inherited several new roles as a result of being a member of a group with the HR Basic role. Remember, roles may include other roles. In this case, the HR Basic role also included roles such as `skill_user` and `sn_hr_core.profile_reader`.

Next, you will add Michelle Corona to the HR Tier 3 group. This group is designed for HR Managers and approvers; therefore, it has the HR Manager [`sn_hr_core.manager`] role.

4. Click **Update** to return to the list of HR Groups.
5. Open the **HR Tier 3** group.
6. Add **Michelle Corona** as a Group Member using the steps detailed above. Observe that Michelle was granted many additional roles.
7. Click **Update**.

LAB VERIFICATION

Verify Sandy Propsom's roles that were granted by his membership with the Employee Relocation Group:

1. **HR Administration > Manage Roles > Manage HR Groups.**
2. Select the **Employee Relocation** group.
3. On the Group Members related list, click **Sandy Propsom's** name to open his user record.
4. On the Roles related list, verify he has the **sn_hr_core.basic** (HR Basic) role.

Note: Remember, Sandy will also have other roles that were granted because they are part of the HR Basic role.

Observe that the *Inherited* column for the **sn_hr_core.basic** role shows *true*. That means the role was inherited based on his membership in a group.

Congratulations!!

*By completing this lab, you have created a new HR Group
and added HR professionals to HR groups*
