

Lab Objectives

You will achieve the following objectives:

- Access your student instance
- Download files needed for class
- Generate and work with a Single HR Profile
- Generate multiple HR Profiles using the Generate HR Profiles module

Scenario

Throughout this course you will be directed to perform the tasks and functions of a Human Resources Administrator working in your own instance, a safe sandbox. The hands-on labs in this course build on a scenario where you work for a fictitious electronics company, named Cloud Dimensions Ltd., which designs and manufactures mobile phones and smart devices. Cloud Dimensions recently implemented ServiceNow HR Service Delivery (HRSD.) The launch was successful and both HR and the employees are pleased. Now, HR leadership has identified additional requirements for the application. You, the HR Administrator, have been tasked with configuring the application to satisfy the new requirements.

Cloud Dimensions recently purchased a company and needs to create HR Profiles for the new employees. The IT department imported their information into the User table, but in order for them to request help from HR, they also need HR Profiles.

In this lab you will generate HR Profiles for the new Cloud Dimensions employees. You will also create and update the HR Profile for an employee who works for the IT department.

In preparation for other labs in this course, you will also download the lab files that will be needed throughout this course.

Note: Your student instance includes demo data that has been pre-loaded for use in these labs. In a real organization, integrations would likely be used to populate and synchronize HR Profile records. In your student instance, there are no integrations; therefore, all updates will be made directly in ServiceNow.

Access your student instance

For the duration of this course, you will access a student instance of the ServiceNow platform. This student instance is assigned only to you and all applications and demo data needed for the course have already been enabled.

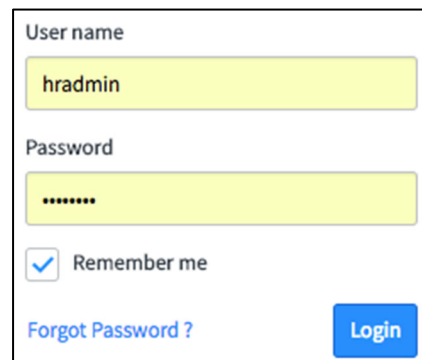

1. Using the student instance URL assigned to you, access the instance in a browser tab. Here is an example of the format used in the URL:

`https://hradmin0303-oct##.lab.service-now.com/`

Note: ServiceNow supports Windows IE version 9 and higher, Chrome, Safari, Firefox, and many other browsers. If you have questions, refer to the product documentation for specific information on browser support.

For this course, you will log in as the **System Administrator [admin]** but will do your work while impersonating the **HR Admin**. HR data is contained in its own set of application scopes to protect its information. Logging in as the Admin and then impersonate the HR Admin will ensure that your work is automatically saved to the appropriate application scope.

2. Log in as the **System Administrator [admin]** using the credentials provided to you.
3. **Impersonate HR Admin**

A screenshot of the ServiceNow login interface. It features a 'User name' field with the text 'hradmin' entered, a 'Password' field with masked characters '*****', a checked 'Remember me' checkbox, a 'Forgot Password ?' link, and a blue 'Login' button.

Note: For instructions on how to impersonate, search for “Impersonate a user” on the product documentation site.

Download Lab Files Needed for Class

Some of the labs in this course require additional files or documents. For easy access, they have all been loaded to your student instance. You will now access the Knowledge article that contains all the files you will need.

1. **Self-Service > Knowledge.**
2. Under Knowledge Bases, select the **Human Resources General Knowledge** base.

3. Under Categories, select **Training**.
4. Click to open the **HR Fundamentals Lab Files** Knowledge article. The lab files are included as attachments in this Knowledge article. You may either download the lab files now or Favorite the article for easy access later.

Note: To Favorite the article, click the **star icon** in the article header. Select a name, icon, and color for the Favorite, then click **Done**.

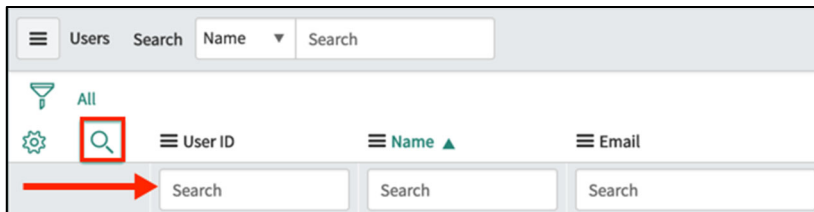

A. Generate a Single HR Profile

Jeremy Robb is a new Cloud Dimensions employee who works in the IT department. Because Jeremy is new, he does not yet have an HR Profile record. Your task is to manually generate an HR Profile for Jeremy Robb and make the necessary updates.

1. You should be impersonating **HR Admin**.
2. **HR Profile > Users**.

Note: The **Application > Module Name** formatting indicates the navigation path to use in the **Application Navigator**. This shorthand in the lab instructions will be used going forward.

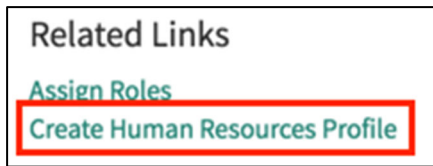

3. If the column level search feature is not already open, click the search glass to open the column level search feature:

4. In the User ID column, type ***jeremy** and click enter. This searches for User IDs containing "jeremy."
5. Click the **Jeremy.Robb** User ID to open his user record.

Knowledge Check: Observe the User Record fields and Related Lists. Notice there is no HR Information in the User Record.

6. Click the **Create Human Resources Profile** related link:

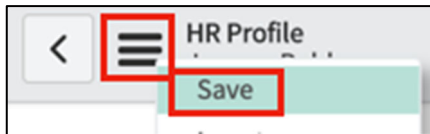

7. In the Employment Information section, make the following updates:

Employment start date: <<select today>>

Employment type: **Full Time Employee**

8. Select **Save** from the form context menu:

Note:

Going forward in this course, the step where the form is saved or submitted will simply be listed as “Save”, “Submit”, or “Update.”

Submit and Update are buttons that are typically displayed in the form header. Save is an option found in the context menu dropdown on the form header.

9. Observe the system message that a role was automatically granted to Jeremy.

Knowledge Check: *The system automatically grants certain roles to employees based on information in their HR Profile. In this example, the role allows Jeremy to be selected in the Opened for and Subject person fields on an HR Case.*

B. Generate Multiple HR Profiles Using the Generate HR Profiles Module

If you need to manually create a single HR profile, the above method is sufficient. However, if you need to create HR Profiles for a group of employees, the Generate HR Profiles module is a more efficient method to use. Next, you will generate HR profiles for all the new Cloud Dimensions employees.

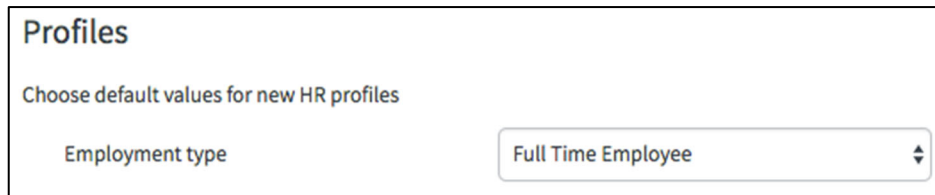

1. **HR Profile > Generate HR Profiles.**

2. In the Filter Users section, create the following filter condition:

Company | is | Cloud Dimensions

3. In the Profiles section, select **Full Time Employee** for the Employment type.

Note: This step is critical for the success of this and future labs:

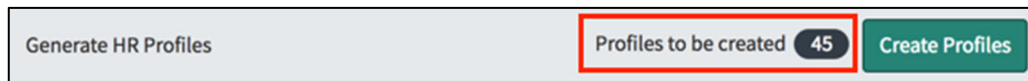

Profiles

Choose default values for new HR profiles

Employment type Full Time Employee

4. Observe the message in the banner that advises 45 profiles will be created:

Generate HR Profiles Profiles to be created 45 Create Profiles

5. Click the **Create Profiles** button.

Knowledge Check: This will create HR Profile records for the 45 employees that match the conditions selected on this form.

6. When the process reaches 100%, click **Show Profiles**. Observe the list of HR Profiles that were created.
7. Close the browser tab with the list of newly created profiles, then click **Close** to close the popup.

Lab Verification

1. **HR Profile > HR Profiles.**
2. Expand the filter condition builder and add a filter condition for:

Created | on | Today

3. Click **Run** to see a list of the 46 HR profiles created today:

HR Profiles	New	Search	Number	Search	1 to 20 of 46
All > Created on Today					
	Number ▲	User	Department	Position	Employee number
	Search	Search	Search	Search	Search
☐	i	HRP0001001	Jeremy Robb	Development	(empty)
☐	i	HRP0001002	Darren Halliday	Product Management	(empty)
☐	i	HRP0001003	Gavin Lowe	Development	(empty)

4. Click **Jeremy Robb's** name in the User column. This will open his User record.

Knowledge Check: Observe that the **Create Human Resources Profile** related link is no longer visible. Instead, the **View Human Resources Profile** related link is displayed. Because Jeremy now has an HR Profile, a new one cannot be created from this view. This helps to prevent duplication.

Congratulations!!

By completing this lab, you have created HR profiles for an individual and for a group of employees. You have also downloaded the lab files you will need for this course.
