

Create HR Criteria and Bulk HR Cases

Lab 05

 10-15m

Lab Objectives

You will achieve the following objectives:

- Create HR Criteria for new UK employees
- Create Bulk Cases

Scenario

Now that many Cloud Dimensions employees have transferred to the new U.K. office, HR anticipates receiving a large number of Employment Verification requests. HR leadership has tasked you with preemptively opening Employment Verification Cases for all U.K. employees. As the HR Administrator, you have determined that a combination of HR Criteria and Bulk Cases will be the most efficient way to satisfy this need.

Lab Dependency: This lab utilizes the HR Profiles created in a previous lab. If you have not created HR Profiles for the Cloud Dimensions employees, you will need to complete those steps for this lab to succeed.

A. Create HR Criteria for new U.K. employees

1. You should be impersonating **HR Admin**. If not, log in as the System Administrator **[admin]** using the credentials provided to you, then impersonate **HR Admin**.
2. **HR Administration > HR Criteria**.
3. Click to open the **US Employees Only** HR Criteria record.

4. On the **Conditions** related list, click to open the **Location** HR condition and observe the filter Conditions applied.

Knowledge Check: In this example, the system will return a list of Full Time, Part Time, and Temporary employees who are in the USA. The link by the Condition field indicates the number of employees who meet those conditions.

HR Condition
Location

Name: Location Active: ☒

Table: HR Profile (sn_hr_core_profile) User column: User

Condition: 179 records match condition [Link](#)

Add Filter Condition Add "OR" Clause

All of these conditions must be met

User.Location.Country is USA AND OR X

Employment type is Full Time Employee AND OR X

or Employment type is Part Time Employee X

or Employment type is Temporary Employee X

5. **HR Administration > HR Criteria.**

6. Click **New**.

7. Complete the form as follows:

Name: **Cloud Dimensions UK Employees**

Description: **Full time, part time, and temporary Cloud Dimensions employees in the UK**

8. **Save.**

9. On the **Conditions** related list, select **New**.

Note:

Some of the filter Conditions used in this lab require you to dot walk into other tables. To enable dot walking you may first need to scroll to the bottom of the list and select **Show Related Fields**. Expand the list again and the dot walking options will be displayed.

For example, if the directions read **User.Location.Country**, first select **User** → **User fields**, then select **Location** → **Location fields**, then select the **Country** field.

10. Complete the form as follows:

Name: **CD Location – UK**

Table: **HR Profile [sn_hr_core_profile]**

User column: **User**

Conditions: **User.Location.Country | is | United Kingdom**

[AND]

User.Company | is | Cloud Dimensions

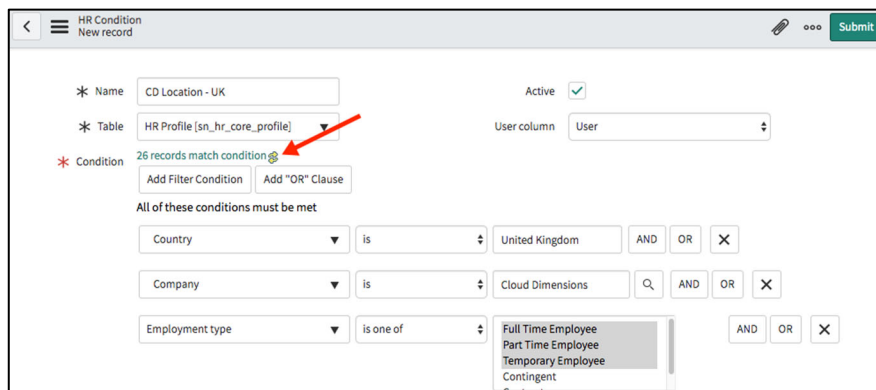

[AND]

Employment type | is one of | Full Time Employee

Part Time Employee

Temporary Employee

11. To confirm the Condition will return some records, click the **Update Count arrows** by the Condition field:

The screenshot shows the 'HR Condition' form in a web application. The form has a header with a back arrow, a menu icon, the title 'HR Condition', and a 'New record' link. On the right, there is a 'Submit' button. The form fields include: 'Name' (CD Location - UK), 'Table' (HR Profile [sn_hr_core_profile]), 'User column' (User), and 'Condition'. The 'Condition' field shows '26 records match condition' with a green arrow icon. Below this, there are buttons for 'Add Filter Condition' and 'Add "OR" Clause'. The condition logic is displayed as 'All of these conditions must be met'. The conditions are: 'Country is United Kingdom', 'Company is Cloud Dimensions', and 'Employment type is one of Full Time Employee, Part Time Employee, Temporary Employee, Contingent'. A red arrow points to the green arrow icon next to the record count.

Note: If the condition returns zero records, verify the conditions you selected, then click the **Update Count arrows** again.

12. Write down the record count as you will use it later in this lab: _____

13. **Submit.**

You also want to use this HR Criteria for User Criteria in the future. User Criteria is used to limit who can see Knowledge articles and Service Catalog items.

14. On the HR Criteria record, click the **Create User Criteria** Related Link:

The screenshot shows a 'Related Links' section with a button labeled 'Create User Criteria'.

Knowledge Check: Observe the message that the User Criteria record was created.

B. Create Bulk HR Cases

Next, you will utilize the new UK Employees HR Criteria record to create Bulk HR Cases for UK employees. Remember, the UK office is a new location for Cloud Dimensions; therefore, all UK employees will need the Employment Verification Letter.

1. **HR Case Management > Bulk Case Requests.**
2. Click **New**
3. Complete the form as follows:
 - a) Name: **Employee Verification Letter for UK employee**
 - b) HR Service: **Employment Verification Letter**
 - c) **Save.**

You now need to define the group of users that will be added to the Bulk Case Request.

4. Under the **User Segment groups** section, select **New**.
5. Label: Cloud Dimensions UK Employees.
6. Opened for: Michelle Corona.
7. Filter by: HR criteria.
8. HR criteria: Cloud Dimensions UK Employees.

The screenshot shows the 'Create user segment' interface. The 'User segment details' section includes a 'Label' field containing 'Cloud Dimensions UK Employees', an 'Opened for' dropdown menu showing 'Michelle Corona', and a 'Work notes' text area. The 'User selection' section features a 'Filter by' dropdown set to 'HR criteria', an 'HR criteria' dropdown set to 'Cloud DimensionsUK Employees', and a status indicator at the bottom stating '26 users selected'.

Knowledge Check: Confirm that the number of users selected matches the count you wrote down in the previous section.

9. **Save.**

10. Click the back button to return to the Bulk Case Request.

You now see the segment group you just created. You have the option to apply additional user segments under the same request.

11. Click **Create Cases**.

12. In the validation pop-up box, click **Create cases** again.

Lab Verification

1. Observe the message at the top of the form advising the Bulk Case request was created successfully:

2. Click the **BCR link** in the message to review the number of Cases the system will create.

Knowledge Check:

The Cases have not yet been created.

The request to process bulk cases is queued and they will be asynchronously created in the background.

Congratulations!

You have learned how to create HR Criteria and used that HR Criteria to create Bulk HR Cases for an HR Service! You have also created a related User Criteria record that may be used to limit access to Knowledge articles and Catalog items.
